Web Developer with 3 years accounting experience. Strong detail-oriented skills and a passion for continuous learning gained from an education in finance and a background in business. Brings a fresh perspective and positive approach to software development. Driven to blend accounting experience with training in Full Stack Web Development from Northwestern to pursue continuous improvement.

APPLICATIONS BUILT

Bookworm | https://bookclubs.heroku.com/
Helping users attain their goal of reading more through building connections. Users sign up, create groups and invite others who are interested in forming a bookclub. Through choosing books, using Google Books, assigning it to the group and maintaining progress this app allows the bookclub to be run fully online. Developed with the full MERN stack.

Bark | https://bark-book.herokuapp.com/
An application to build a community of dog lovers around certain breeds of dogs. Users sign up, create a profile, and register their dogs which allows them access to the groups around those dog breeds. Developed with NodeJS, Express, Handlebars, CSS and MySQL.

Plan Easy | https://smushed.github.io/PlanEasy/
A single page application for users to fill out a calendar indicating their free time. The app pulls other users free time from a database then compares it to the current user's freetime and allows the user to search events on that time. Developed entirely with Javascript, HTML, CSS and Firebase.
